

Phoenix · retained versus excluded predictor distributions

- Retained: identical predictor values in all 11 passes
- Excluded cells · June
- Excluded cells · July
- Excluded cells · August
- Excluded cells · September

Nonthermal support only

Each excluded curve represents one pass.
No canopy replacement cutoff.

Full distributions and original-population
quantiles are preserved in the table.

Cell-weighted empirical CDFs sampled at 201 quantiles; all source observations enter summaries. The graph does not show cooling effects.
